

Whether it's a large orchestra or an art song, a jazz trio or a rock band, music has never sounded more natural, more exciting, more moving via an Audioplan cable. Immerse yourself in the music with Maxwell U, experience your favourite pieces in a new way, regardless of whether they were produced audiophile or recorded historically. Even with poorly produced recordings, Maxwell U lets you hear through to the core of the music. The fact that this is possible without annoyance, despite phenomenal resolution, was part of the specifications. Surprisingly, even in less than perfectly tuned systems with sound peculiarities, the sound seems more natural, Maxwell U has a balancing effect, so to speak. This can only be explained by the fact that the balance and transparency of Maxwell U does not amplify the chain's peculiarities. It lets through a maximum of structured information in all areas and thus facilitates a reconstruction of the natural sound in the brain. Or to say it with Benjamin Baum from fairaudio: „If you want to experience even more live sound, you don't need cables, you need tickets.“

Maxwell U is available as an RCA cable and as a balanced XLR cable. It is suitable for phono and high-level connections. A variant for digital connections is also available.

Technical Data	Maxwell U – Interconnect Cable
Asymmetrical connection, "Live" to ground	
Capacitance	ca. 150 pF/m
Inductance	ca. 0.2 µH/m
Loop resistance	ca. 0.05 Ohm
Symmetrical connection, "Live" or "Return" to ground	
Capacitance	ca. 100 pF/m
Inductance	ca. 0.60 µH/m
Loop resistance	ca. 0.08 Ohm/m
Standard connections	WBT0152AG RCA-plugs, Neutrik XLR-AG plugs
